Objective

Experienced Java backend developer with over three years of hands-on experience in designing, developing, and maintaining scalable backend systems. Proficient in Java, Spring Framework, and RESTful APIs, with a solid understanding of database management and cloud services. Seeking to leverage my expertise in a dynamic and innovative environment to contribute to cutting-edge projects and further enhance my skills in software engineering.

Skills

Backend Development: Java7/Java8, Spring Boot, Hibernate, JDBC, Maven, Microservices, Spring Batch, Rest Api, JPA, Spring Security

Database Management: MySql

Streaming/Messaging: Kafka

Tools: Docker, Jenkins, Git

Cloud: Azure, AWS

Soft Skills: Team Player, Bais for Action, Deliver results

Functional Skills

Automotive Domain

- ❖ Designed and developed RESTful APIs to efficiently retrieve dealer and vehicle information for market support systems, ensuring seamless integration with frontend applications.
- ❖ Optimized database queries and data retrieval processes, reducing load times by 20% and improving system responsiveness for dealer networks.
- ❖ Implemented batch processing systems using Spring Batch to integrate purchase order data from external APIs, enhancing data synchronization and operational efficiency.
- ❖ Developed Excel-based reporting features using Apache POI for accurate data extraction and representation, streamlining dealer reporting and data analysis.

Banking & Finance Domain

- ❖ Developed RESTful APIs for core banking processes, including loan application management, streamlining data flow and integration with external systems.
- ❖ Implemented robust authentication, validation, and error-handling mechanisms to ensure data integrity and a secure user experience in financial transactions.
- ❖ Provided L3 application support for digital banking platforms, resolving critical production issues related to user authentication (OTP failures), session management, and data upload processes.
- ❖ Coordinated with frontend teams to diagnose and resolve cross-browser compatibility issues, ensuring consistent functionality across enterprise banking dashboards.

Experience

Nagarro | Java, Spring Boot, JDBC, Spring Batch, Git, Maven, Angular **Software Engineer | Jan/2022–May/2024**

Project: MSS (Market Support System) – Mercedes-Benz

Domain: Automotive

Project Overview:

Developed and maintained the Market Support System for Mercedes-Benz, a platform supporting dealer operations, vehicle data management, and reporting. Focused on creating efficient backend services, optimizing data flow, and integrating features for improved dealer support and data accuracy.

Key Responsibilities:

- Designed and developed RESTful API endpoints for retrieving dealer code and information, collaborating with frontend teams for seamless UI integration.
- Optimized complex database queries, improving data retrieval performance and reducing application load times by 20%.
- Implemented a feature using Apache POI to generate and populate Excel reports directly from database queries, enhancing reporting accuracy and efficiency.
- Developed a scheduled Spring Batch job to fetch and process purchase order data from an external API into the database, automating a critical data integration pipeline.
- Executed key code changes including UI updates (dealer name display), removal of redundant documents, and database cleanup to eliminate duplicate vehicle classifications.

Key Achievements:

- Enhanced system performance significantly through query optimization and efficient batch data processing.
- Automated manual reporting and data entry tasks, improving data accuracy and team productivity.

Mphasis | Java, Spring Boot, JDBC, Git, Maven, Angular

SoftwareEngineer | Aug/2024-March/2025

Project: RLMS (Retail Loan Management System) - SBI

Domain: Banking

Project Overview:

Contributed to the development of a Retail Loan Management System for SBI, focusing on creating secure and efficient APIs to streamline the loan application lifecycle, from initiation to processing and reporting.

Key Responsibilities:

- Developed RESTful APIs to manage loan application data, enabling efficient retrieval and secure integration with external credit and verification systems.
- Collaborated with cross-functional teams to implement authentication protocols, data validation rules, and comprehensive error-handling mechanisms.
- Utilized Apache POI to build features for importing and exporting loan application data via Excel sheets, facilitating bulk operations and regulatory reporting.

Key Achievements:

- Delivered robust APIs that formed the core of the loan processing workflow, enhancing system reliability and user

experience.

- Enabled efficient bulk data operations through Excel integration, reducing manual processing time for bank staff.

Tech Mahindra | Java, Spring Boot, JDBC, Maven, Hibernate

Software Engineer | March/2025-Oct/2025

Project: YONOB (Yono Business) - SBI

Domain: Banking

Project Overview:

Provided Level 3 production support for SBI's YONO Business platform, a critical digital banking portal for corporate clients. Responsible for diagnosing, debugging, and resolving complex technical issues impacting authentication, transactions, and user experience, ensuring high platform availability and reliability for high-volume banking operations.

Key Responsibilities:

- Provided expert L3 support for a high-traffic digital banking platform, analyzing and resolving production incidents within strict SLAs to minimize business impact and user disruption.
- Debugged and resolved an OTP delivery failure during password resets by tracing the request flow, identifying a username format parsing issue (missing underscores), and implementing a backend fix to restore seamless authentication flows for thousands of users.
- Diagnosed and fixed a critical session management issue where user sessions expired during large file uploads (>10MB). Analyzed server configurations and application timeouts, implementing a solution that adjusted session persistence for long-running operations, eliminating transaction failures.
- Conducted root cause analysis (RCA) for recurring issues by monitoring application logs (Splunk), analyzing performance metrics (Dynatrace), and profiling database queries to identify underlying performance bottlenecks.
- Collaborated with L1/L2 support, infrastructure, and development teams to facilitate knowledge transfer and implement preventive measures, reducing recurring ticket volume.

Key Achievements:

- Successfully resolved high-priority P1/P2 incidents related to core banking functions (authentication, transactions), directly improving platform stability and user trust.
- Enhanced system reliability by implementing fixes for session management and timeout handling, significantly improving the user experience for bulk operational tasks.
- Demonstrated strong full-stack troubleshooting capabilities, effectively resolving issues spanning backend business logic, database interactions, and frontend compatibility.
- Contributed to a reduction in mean time to resolution (MTTR) through systematic debugging and effective cross-team collaboration.

Project

Real-Time Data Streaming | Kafka, Java, Spring Boot, Hibernate, Microservices, MySQL

- **Architected & implemented a real-time data streaming pipeline** using Apache Kafka to ingest live Wikimedia event streams from <https://stream.wikimedia.org/v2/stream/recentchange>, processing thousands of events per second with millisecond latency.

- **Developed a multi-module Maven Spring Boot application** featuring separate producer/consumer microservices; producer module consumed Wikimedia's SSE stream via EventSource, while consumer module persisted data to MySQL with fault-tolerant processing.
- **Engineered a high-performance Kafka Producer** using Spring Kafka and OkHttp EventSource to read real-time Wikimedia edits, ensuring reliable message delivery with proper serialization and User-Agent compliance for API rate limiting.
- **Built a scalable Kafka Consumer** that consumed messages from “wikimedia_recentchange” topic and persisted structured data into MySQL using Spring Data JPA, implementing idempotent operations for optimal database performance.

Education

POORNIMA UNIVERSITY

B.Tech, Computer Science and Engineering | May-2022 | GPA: 8.1/10

S P H B Inter College

X, Mathematics | May-2015 | Grade: 79%

National Institute of Open Schooling

XII, Mathematics | May-2018 | Grade: 74.4%

Honors & Awards

POORNIMA UNIVERSITY

Scholarship till 8th Semester

NAGARRO

Star of the Month | Jan-2023

Course Work

Data Structure, Developing Web Apps, Advanced Java, Spring Frameworks, Cloud Services
